The showers throughout the main jail were observed to have exposed concrete, fruit flies and an unknown black substance on the walls. The shower sanitation issues were a deficiency on the 2018 and 2019 annual inspections. The inspection team also observed sanitation issues in the kitchen including unresolved areas identified from the 2019 Health Inspection Report.

Preventive maintenance, to include necessary repairs, shall be conducted to ensure a safe, secure, and sanitary facility.

The main jail was identified to have false secure door indicators on the control board, numerous lights out throughout the facility and several exposed wall joint gaps throughout the facility.
